Avg House Price	Customer Churn Rate	Total Sales Revenue	Top Product

Business Problem

This capstone analysis addresses three interconnected business challenges: (1) understanding the key price drivers in the residential real estate market to guide investment decisions; (2) identifying the root causes of customer churn for a telecommunications company; and (3) optimising regional and product sales strategy to maximise revenue growth.

Key Findings

Real Estate	Customer Churn	Sales
Property area is the strongest predictor of price ($r=0.62$). City-centre properties command a 28% premium over rural equivalents. Villas outperform apartments by 14% on average.	Month-to-month contracts churn at 21%, vs only 7% for 2-year contracts — a 4× gap. Customers with tenure <12 months are highest-risk.	Laptops lead revenue at ■3889K. North region outperforms others. Seasonal peaks observed in Q3.

Top Recommendations

■ Real Estate	Focus new development on City Centre Villas (highest median price ■26M). Leverage the area-price correlation by marketing large-format properties to premium buyers.
■ Churn Reduction	Launch a contract-upgrade campaign targeting the 170 month-to-month customers. A 10% conversion to 2-year contracts could save an estimated ■240K in annual revenue.
■ Sales Growth	Double down on Laptop inventory and expand presence in North region. Introduce cross-sell bundles pairing Laptops with Headphones (highest-margin accessories).
